# I had TONS of Questions

How will we make this

How can you build a course  
for a whole semester?

What kind of support will we have

Will the work we get students  
the future?

Is the district really committed to making this awesome?

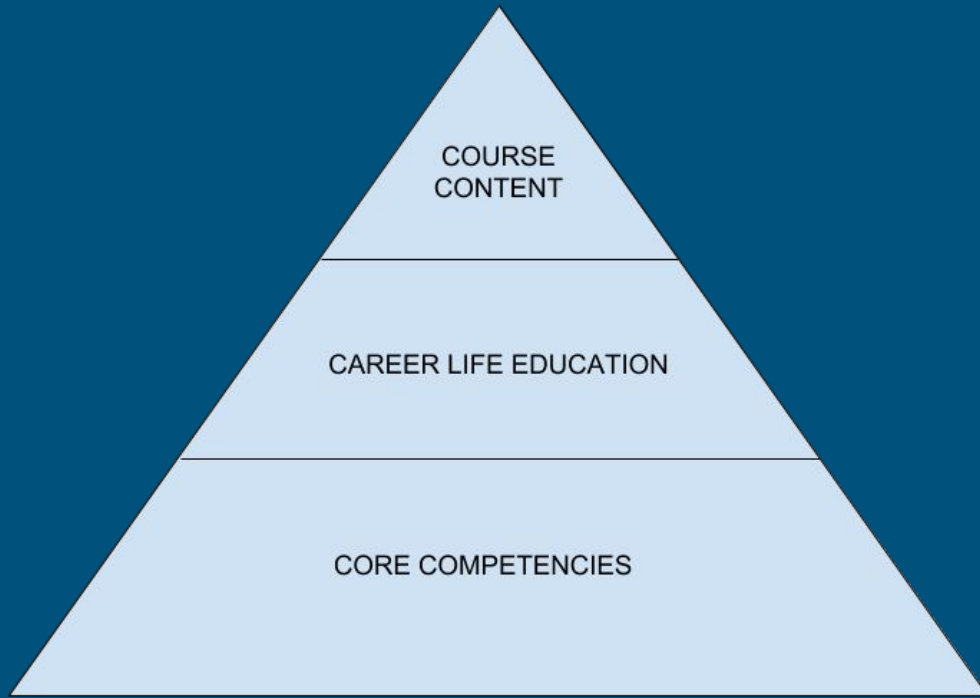

# What Have I Learned?

Career Education has never been more important to the future success of our students

There is no Kool-Aid... All Staff need to get on board for this to be successful

This is a vital part of the new curriculum not just a checkbox to tick off

It's the connecting piece between the core competencies, and the courses.

CORE COMPETENCIES

# What Have I Learned?

Career Education has never been more important to the future success of our students

There is no Kool-Aid... All Staff need to get on board for this to be successful

This is a vital part of the new curriculum not just a checkbox to tick off

It's the connecting piece between the core competencies, and the course content.

We are a very diverse group of educators with many different backgrounds and experiences

This course is not one size fits all

The district has shown they are absolutely committed to making this course successful

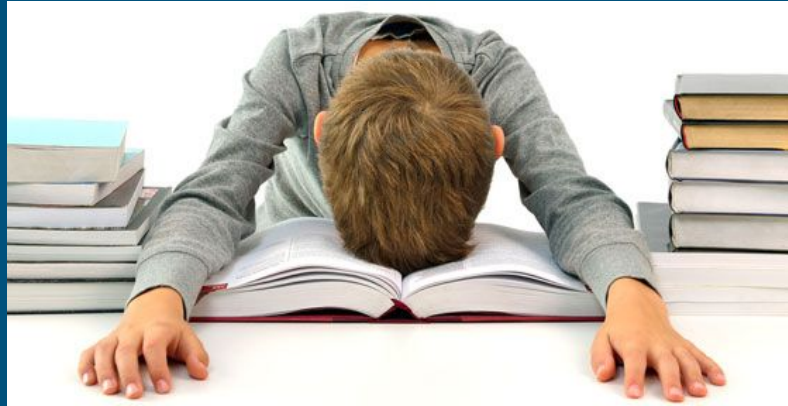

This course will allow students to discover things they did not know about themselves, build essential reflective skills, and encourage them to make a plan that is applicable to them.

I will have a much deeper connection to students in this course than ever before

That I haven't learned nearly enough yet to be competent in this course....however...

This course *is not* heavy in knowledge...

This course *is* about...

Igniting a passion where one does not yet exist, and making that feeling contagious.
